

## How to Use YubiKey

### Background

The following document will walk through how Federal Home Loan Bank of Dallas (FHLB Dallas) members will authenticate when logging into SecureConnect using a YubiKey device

### Launch the desktop application

First, launch a browser window, preferably Chrome, and launch the Yubico desktop application. This is a standalone application and the location of the application will adjust so the windows will fit on one screen.

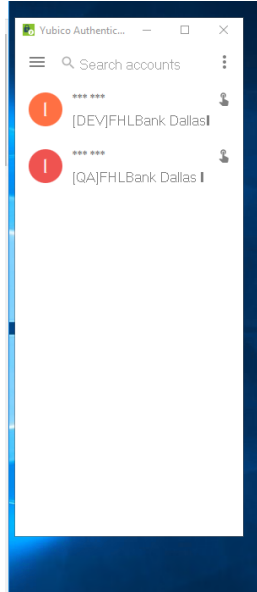

### Insert the YubiKey device into your computer's USB slot

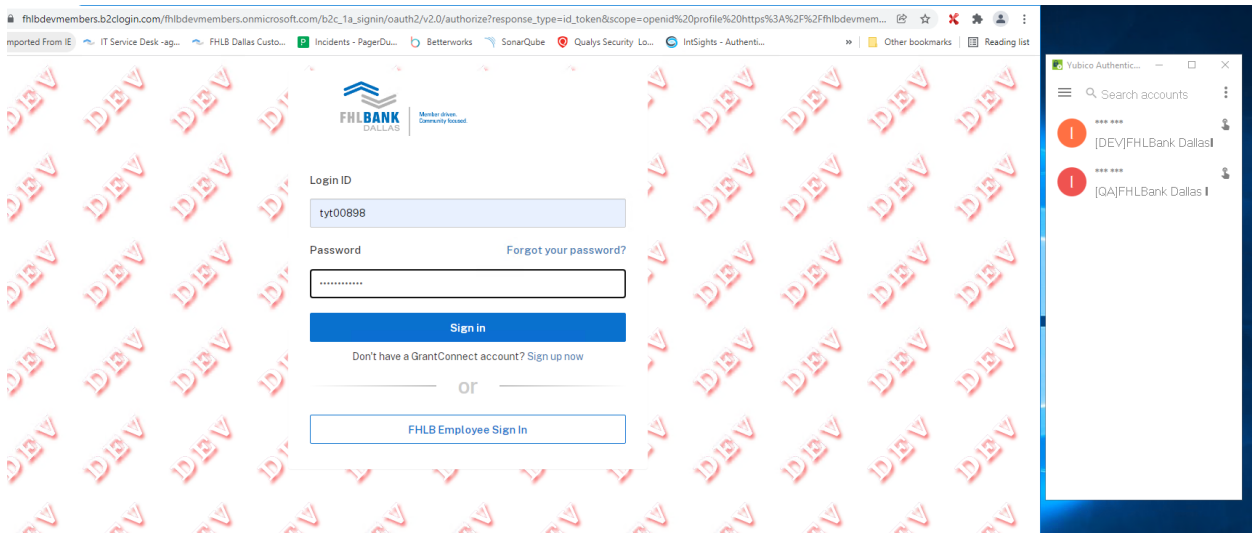

Insert the YubiKey into the computer's USB slot.

You will see the applications in which you have established a multifactor association with listed which you have established multifactor authentication. Typically, the member will have only one listed for FHLB Dallas named "FHLBank Dallas Members".

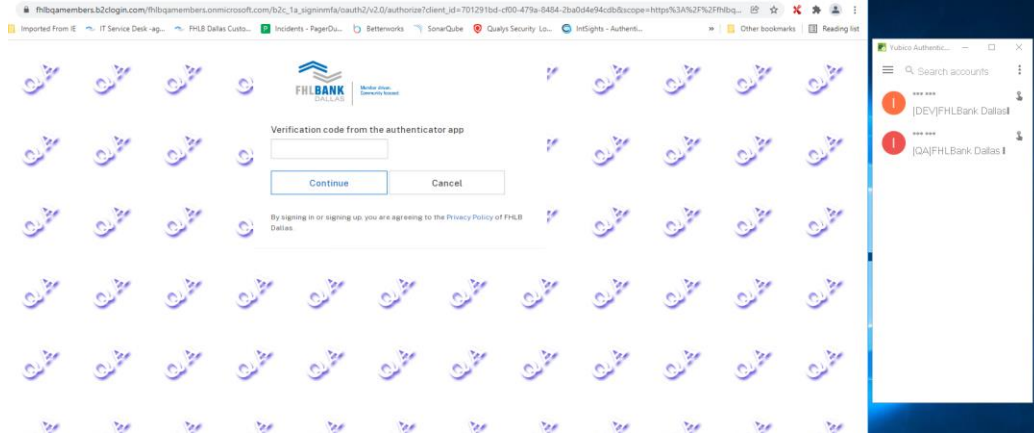

**Launch SecureConnect and log in**  
Go to SecureConnect login page and log in with your userID and password.

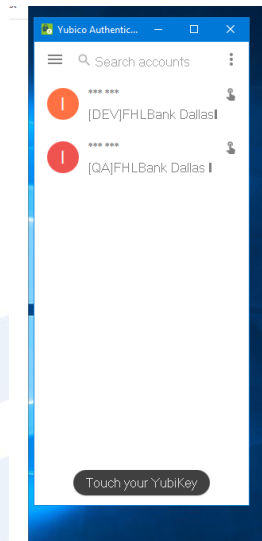

### Complete the Multifactor Authentication

You will be presented with the multifactor verification window as follows:

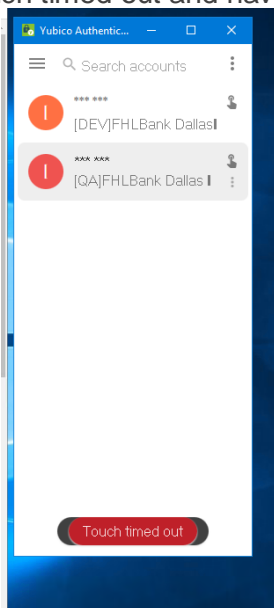

From the Yubico Authenticator desktop application, double click the account associated with the application. This will also copy the six-digit authentication code so you can paste it in the field prompting you for multifactor authentication. If you elected during the enrollment process to require “touch” of the key for use, you then simply touch the key plugged into your computer.

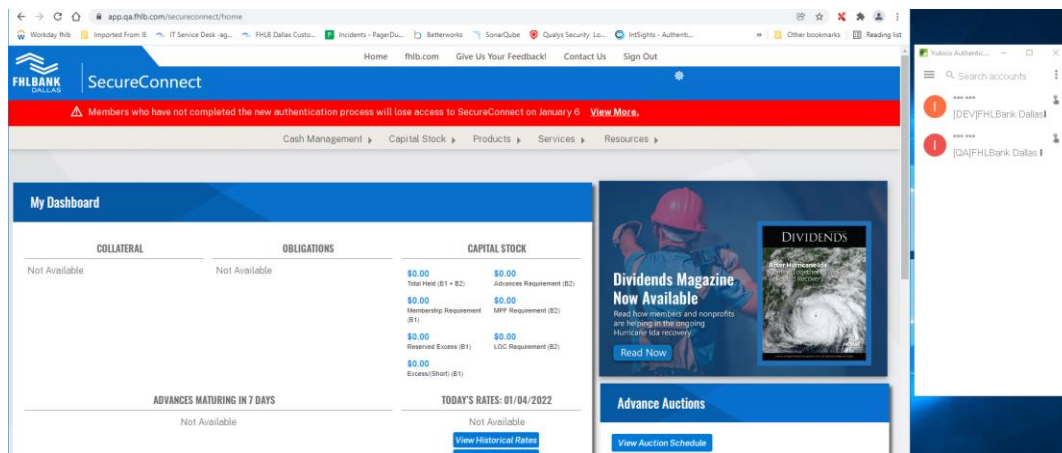

The code is available in the Yubico app and you can copy it to your clipboard for ease of entry.

This next step is optional based on how you elected to set up the key. If you do not touch the key within a few seconds, you will see notification that the touch timed out and have to double click again to get a new code:

Finally, you will receive authentication and be allowed into the application.
